I am **Lars Larsgard** and I design with ***character*** and ***intent***.

My passion for creating began in my grandfather's workshop and has since evolved into a professional pursuit of solving real-world problems through interdisciplinary knowledge and social understanding.

I thrive in “out-of-the-box” physical prototyping, yet I am equally at home diving into complex theoretical problems.

A strong creative alignment for me is the principles of Dieter Rams, specifically the idea that good design is honest and functional.

I value a clear time framework, as well as the “bureaucratic coffee breaks” that follow in larger administrative productions.

Learning new skills and working in cultural settings alongside passionate people gives me energy. In my spare time, I do music, perform satirical theatre, linguistics, and enjoy going bouldering or hiking with friends.

The coffee is done brewing. Let's look at the work.

LYSBRE «LIGHT DRAPING GLACIER»

Course

Material Constraints *(self defined)*

Exploring Brand Identity

Date

December 2025

My Process

Following a series of guest lectures on brand identity and **design DNA**, I explored how **manufacturing constraints** and **tooling parameters** dictate the final design language.

My research looked at the industrial heritage of Nedre Foss, specifically the **sand-cast steel** molds used for their cast-iron candle holders. I investigated the **immaterial presence** of glass and how physical mass occupies a space. Inspired by the way **glaciers** fragment light, I translated the **industrial language** of steel molds into a clear glass geometry optimized for refractive light diffusion and **thermal stability**.

Final Renders

MATCHA STORAGE TOWER

Course

Cultural Overinflation (self defined)

Cultural Understanding and Communication
Group Project w. Kristiina Kulikova

Date

January - March 2026

Our Process

This course focused on **ethnographic analysis** of subcultures from an outsider’s perspective. We chose to study the rich traditions and community surrounding matcha tea preparation.

Interviews revealed a **sociological shift** in Western trend adaptations and made us define the rise of aesthetic-driven, transient users as **cultural over-inflation**.

Prototyping & research

MATCHA STORAGE TOWER

Our Process

Our defined task: *How can design counteract cultural over-inflation and support new users develop a lasting connection to the ritual?*

The final products utilize materials with longevity and **patina**.

A modular, user repairable design combats **planned obsolescence**.

This enforces a **long-term relationship** through **haptic feedback** and adaptive functionality.

Final Prototype

SURFACE ASSET LIBRARY

Course

Surfaces As Objects

Date

September 2024

My Process

The project that resonated most prioritized the *iterative process* and a conceptual exploration over a finalized product.

We were exercised in rapid prototyping and radical, unconstrained experimentation. My first path: "*How can the surface of cutlery affect taste?*"

Material Experiments

SURFACE ASSET LIBRARY

My Process

Extensive alterations across *interdisciplinary crafts* led me to the kinematics of *bistable auxetic structures* and its negative Poisson's ratio.

Following a paper on the structure, I conducted computational geometry in *Python*, generating models for 3D-printing in a flexible TPU.

Rapid iterations in scale, pattern, and environment ultimately transformed my personal methodology for *conceptual exploration* and idea generation.

STUBBE «STUMP STOOL»

Course

Date

My Process

Final Prototype

Scandinavian Compact Living

Material Specialization: Wood

May - June 2025

How does **Scandinavian design** reconcile with the spatial constraints of **compact living**? Through refined woodworking techniques, this stackable stool attempts to define a crossover.

The construction uses **traditional and digital** craft: the legs were **lathe**-turned from 2x4s, while the seat was **CNC**-routed to fit a **DfM**. Custom jigs were made for every stage to ensure **repeatable accuracy** and structural integrity.

STUBBE «STUMP STOOL»

My Process

A conscious form ideology guided the project from the start, grounding the minimalist, compact result in specific user needs.

A moment of rest in a small apartment on a tight schedule.
